Kapish

Search & AI

Unlock trusted AI insights from your business records

Kapish **Search & AI** connects OpenText Content Manager with Microsoft Copilot, enabling users to securely search, analyse, summarise and generate content using authoritative organisational information.
Your users work in Word, Teams, Outlook and SharePoint. Your trusted information resides in OpenText Content Manager. Search & AI closes the gap, indexing your records into Microsoft Graph for Copilot to access alongside everything else in Microsoft 365.

No migration. No duplication. OpenText Content Manager security and access are fully respected.
By bringing together content from OpenText Content Manager, Microsoft Teams, SharePoint, OneDrive and Exchange, users can find information where they work while maintaining governance, security and compliance requirements.

Key Features

- Connects Microsoft Copilot with enterprise knowledge stored in OpenText Content Manager.
- Indexes records from OpenText Content Manager into Microsoft Graph, enabling Copilot access to trusted organisational information.
- Enables enterprise search across OpenText Content Manager, Teams, SharePoint, OneDrive and Exchange through a unified search experience.
- Allows users to execute searches directly from Microsoft 365 applications, SharePoint and Teams, helping them find information without disrupting their workflow.
- Brings together records, documents, conversations and organisational knowledge within a single AI-powered experience.
- Uses natural language queries through Microsoft Search and Copilot to search and analyse organisational information.
- Derives insight and leverages the wealth of knowledge available in OpenText Content Manager.
- Generates summaries, reports, emails and other content using trusted business records.
- Delivers contextual insights through follow-up questions, customised responses and AI-assisted content creation.
- Helps users discover relevant information across multiple enterprise systems from a single search experience.
- Grounds AI responses in governed, compliant and authoritative business records.
- Ensures users only access and analyse information they are authorised to view.
- Enables records to be captured and protected directly from search results, supporting consistent information governance.
- Supports organisational security, compliance and records management requirements across enterprise information assets.
