- Content Manager 23.4
- Content Manager 24.2

Information for IT Department

Kapish Record Remover is a client-side application that facilitates the 'soft' removal of Content Manager records by allowing users to select them for deletion, and subsequently hides the records from users by altering the View Metadata Access Control to a predefined Content Manager location. Software installation is via Microsoft Installer (MSI) file, this can be run manually on each PC or via common network installation methods (e.g. SCCM, SMS, Group Policy etc.).
