

# Web Grid Cloud

Embed, Share, Simplify; Secure Document Access – Anywhere, Anytime

Web Grid Cloud is the next-generation web interface for embedded document sharing and management. Designed with a responsive user interface, Web Grid Cloud works across mobile, tablet, and desktop devices. Integration with the Easy Link allows desktop users to print, view, and edit documents. Create new records in Content Manager in the containers exposed through the saved searches and utilise check-in styles to keep the registration process simple.

Advanced search options and hierarchical displays make finding and organising records easy, all while strictly adhering to saved search boundaries and enforcing the Content Manager security model. Security is at the heart of Web Grid Cloud. By leveraging a cloud-hosted architecture, organisations avoid exposing their Content Manager systems to the internet while benefitting from ISO27001-certified hosting and management provided by Kapish.

## Key Features

- Publish a list of records from Content Manager with any structure based on a Saved Search.
- Create new records using Check-in Styles and update documents with new revisions.
- Adherence to Content Manager Security and Access Controls including auditing.
- Grids can be published to any Web Based Platform via iFrames.
- Ability to configure Authenticated or 'Anonymous' Grids for public consumption.
- High level of customisation including metadata display, download links, search, action menus and styling of your grids.
- Responsive Mobile Display that adapts seamlessly to various screen sizes.
- Integrate with Easy Link to enable Editing and Printing in desktop deployments
- Central Configuration Portal to intuitively create, edit and publish your Grids.

## Specs
