

Kapish

Digital Transformation Advisory

Your Partner for Digital Transformation Clarity, Governance and Momentum

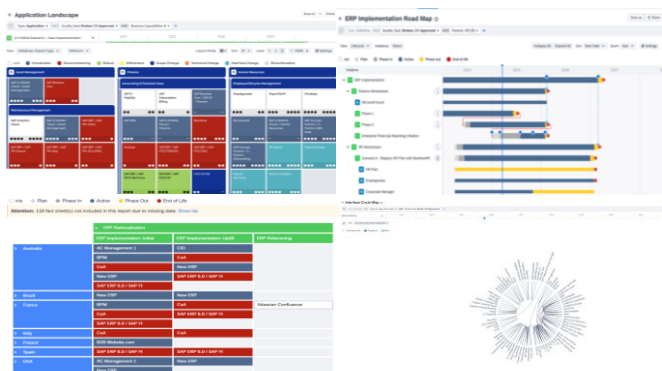

Kapish helps organisations de-risk and accelerate digital transformation across any technology platform. We combine deep transformation expertise with SAP LeanIX and Signavio to deliver real-time visibility, impact analysis, integrated roadmaps, and strong, insight-led governance across the entire transformation program. This enables leaders to rapidly baseline their current state, define future-state business and technology capabilities, and maintain continuous oversight; ensuring transformation remains aligned to strategy, executable in delivery, and on track to realise value.

What's included?

- ✓ **Discover: Capture the Current State (As-Is)**
 - Rapidly baseline the current business and technology landscape to establish a clear, evidence-based scope; explicitly defining what is in scope, what is out of scope, and where change will and will not occur.
- ✓ **Analyse: Shape the Transformation Approach**
 - Assess impacts, risks, and options through structured scenario analysis to understand trade-offs and optionality, enabling leaders to shape a confident and adaptable transformation approach.
- ✓ **Design: Define the Future State (To-Be)**
 - Define future-state capabilities and target architecture aligned to strategic intent, and design clear transition paths that sequence change while managing risk, dependencies, and delivery constraints
- ✓ **Implement: Execute Transformation Waves**
 - Execute transformation waves with end-to-end visibility and control, ensuring delivery remains aligned to the target architecture, key dependencies are managed, and risks are identified and addressed early.
- ✓ **Operate: Monitor, Optimise, and Realise Value**
 - Using LeanIX, monitor the implementation of future-state capabilities, track changes to the digital landscape. Using process intelligence, monitor process compliance and efficiencies, identifying areas that require focus and attention.

Service Benefits

- **Platform-agnostic transformation support**, focused on business value, not vendors
- **Rapid current-state visibility** to establish a trusted baseline and expedite project delivery
- **Clear view on change impact** across your organisation e.g. org units impacted when
- **Clarity on cross-program dependencies**
- **Clear future-state capability definition** aligned to strategy
- **Clarity on your operating model** post implementation to ease transition into BAU
