

Kapish

Business Transformation
and Enterprise
Architecture

Kapish helps organisations drive successful transformation, improve visibility and maximise the value of technology investments through expert consulting and advisory services.

Our specialised **Business Transformation Centre of Excellence** helps organisations navigate complex IT environments and establish sustainable practices for enterprise architecture, technology cost management and operational optimisation. Leveraging leading platforms including **SAP LeanIX, SAP Signavio, IBM Apptio and Cloudability**, we provide the insights and frameworks needed to support informed decision-making and measurable business outcomes. With more than **15 years' experience** working across government, education and enterprise sectors, Kapish brings deep expertise in managing the scale, governance and risk considerations associated with complex transformation programs.

PACKAGES

1 Foundation Package

Perfect for organisations beginning their Enterprise Architecture Journey

2 Process & Architecture Alignment Package

Unlock a unified view of your business processes and IT landscape. This package brings business and IT together, aligning capabilities, processes and systems to drive faster decisions, smarter prioritisation and smoother transformation.

3 Strategic Transformation & Cost Governance Package

Power enterprise-wide transformation with a single, integrated view of your architecture, processes and technology costs. This package gives organisations the clarity, transparency and governance needed to make confident, strategic decisions, and maximise the value of every technology investment.

Ready to Transform with Confidence?

No matter which package you choose, Kapish is committed to helping your organisation build lasting transformation capability, streamline operations and maximise the value of your technology investments.

1 Foundation Package

Perfect for organisations beginning their Enterprise Architecture Journey

What’s included?

LeanIX Implementation & Onboarding	Application Portfolio Assessment	Capability Mapping Workshop	Starter EA Governance Framework	Training & Upskilling
Configure the workspace, data model, integrations and role structures.	Build a clear, accurate view of the current IT landscape and identify redundancies.	Link applications to business capabilities to establish common language across stakeholders.	Introduce lightweight governance to stabilise data quality and decision making.	Tailored sessions for architects, product owners and IT leaders.

Outcome: A live, data driven EA platform with foundational governance, enabling faster decision-making and visibility across your technology ecosystem.

2 Process & Architecture Alignment Package

Unlock a unified view of your business processes and IT landscape. This package brings business and IT together, aligning capabilities, processes and systems to drive faster decisions, smarter prioritisation and smoother transformation.

What’s included?

LeanIX Implementation & Onboarding	Application Portfolio Assessment	Capability Mapping Workshop	Starter EA Governance Framework	Training & Upskilling
Configure the workspace, data model, integrations and role structures.	Build a clear, accurate view of the current IT landscape and identify redundancies.	Link applications to business capabilities to establish common language across stakeholders.	Introduce lightweight governance to stabilise data quality and decision making.	Tailored sessions for architects, product owners and IT leaders.
Signavio Process Intelligence & Modelling Setup	End-to-End Architecture + Process Mapping	Process Maturity & Improvement Analysis	Transformation Scenario Planning	Cross-Functional Adoption Program
Establish a consistent modelling standard and centralised process repository.	Integrate LeanIX and Signavio to create a single source of truth for processes and systems.	Identify bottlenecks, compliance risks and automation opportunities.	Model future-state process and system impacts across faculties and business units.	Bring business and IT together with guided change management support.

Outcome: A unified view of business capabilities, processes and supporting technology, enabling evidence-based prioritisation and smoother transformation delivery.

3 Strategic Transformation & Cost Governance Package

Power enterprise-wide transformation with a single, integrated view of your architecture, processes and technology costs. This package gives organisations the clarity, transparency and governance needed to make confident, strategic decisions, and maximise the value of every technology investment.

What’s included?

LeanIX Implementation & Onboarding Configure the workspace, data model, integrations and role structures.	Application Portfolio Assessment Build a clear, accurate view of the current IT landscape and identify redundancies.	Capability Mapping Workshop Link applications to business capabilities to establish common language across stakeholders.	Starter EA Governance Framework Introduce lightweight governance to stabilise data quality and decision making.	Training & Upskilling Tailored sessions for architects, product owners and IT leaders.
Signavio Process Intelligence & Modelling Setup Establish a consistent modelling standard and centralised process repository.	End-to-End Architecture + Process Mapping Integrate LeanIX and Signavio to create a single source of truth for processes and systems.	Process Maturity & Improvement Analysis Identify bottlenecks, compliance risks and automation opportunities.	Transformation Scenario Planning Model future-state process and system impacts across faculties and business units.	Cross-Functional Adoption Program Bring business and IT together with guided change management support.
Apptio IT Financial Management Setup Build a unified cost model across cloud, projects, infrastructure and applications.	Cost Augmented Architecture Insights Overlay Apptio cost data onto LeanIX to reveal true TCO for applications and capabilities.	Cloudability for Cloud Cost Governance (optional): Optimise multi-cloud spend, forecast usage and identify waste.	Prioritised Rationalisation Roadmap Combine process efficiency, technical fit and financial insights to produce a high-impact roadmap.	Strategic Transformation Advisory Quarterly capability uplift sessions, steering support and value tracking.

Outcome: A fully integrated transformation ecosystem that connects process, architecture and cost, empowering leaders to make strategic, financially-credible decisions at speed.

Our approach is tailored to each organization’s maturity and operating environment, delivering sharper insights, faster time-to-value and clearer, more confident decision-making. With experienced consulting and advisory specialists, we bring proven frameworks, cross-sector experience and practical accelerators that support transformation from strategy through to execution.
